

WP4 Interventions

1 Current situation

Description of the current FLW situation

Impact of food loss and waste

 Socio-economic impact

 Food & nutrition security impact

 Environmental impact

2 Aspired impact, FLW ambitions and commitment

Description of FLW reducing ambitions

 Socio-economic impact of intervention

 Food & nutrition security impact of intervention

 Environmental impact of intervention

 Impact of intervention on food loss %

3 Components intervention strategy

 Describe the central elements of the technological innovations that you consider for your FLW intervention.

 Describe the required training, skills development and knowledge strengthening that are required for your FL strategy.

 Describe proposed procedural and organisational innovation. Where relevant describe innovative protocols, contractual agreements and financing mechanisms.

4 Implementation plan

Action	Aspired outcomes	With who	Resources	When	M&E

Guiding questions to fill the canvas

1 Current situation: what do you know

Summarise the current state of food loss and waste for the case you are looking at.

Use the overview you have created in previous excel sheet to describe the foodloss and waste (FLW) situation, highlighting what you know in terms of where losses are occurring, why losses are occurring and what percentages of produce is being lost.

If you consider you are missing vital pieces of information about the FLW situation use the documents and tools available in this website to get more detailed insights which will help design effective food loss solutions.

Describe what type of impact the mentioned FLW generates

In socio-economic impact, consider how FLW affects income and livelihoods of producers and other value chain actors (transporters, aggregators, intermediaries, wholesalers, consumers, etc.).

In food and nutrition security consider the volumes of produce that are lost before reaching the consumer.

In environmental impact consider the land, water, and energy that was used to produce the product that are lost and associated green house gases.

2 Aspired impact, FLW ambitions and commitment

Describe your how your ambitions to reduce FLW will contribute to specific SDG's and what impact you aspire to have.

Describe, if relevant, details of your ambitions to contribute to income and livelihoods, availability of foods and environmental footprint of the value chain.

Copy that same box and corresponding text to canvas setup.

-  **Socio economic impact** of intervention
-  **Food & nutrition security impact** of intervention
-  **Environmental impact** of intervention

3 Components intervention strategy

 **Technology**

This includes low and high tech along the chain, measures to control product temperature and storage and packaging interventions.

 **Training, skills, communication**

This includes training, product knowledge and value chain knowledge and communication between actors.

 **Organisational, procedural**

This includes understanding power balances in chain and enabling environment, organisation of people and building trust.

Reflect if the components you are considering are affordable, accessible and acceptable for relevant actors in the supply chain. How long will it take for the strategy to generate impact?

4 Implementation plan

Action	Aspired outcomes	With who	Resources	When	M&E
Describe concrete activities that are part of your implementation plan.	Describe what you want to achieve and the type of outcomes you are pursuing for each activity.	List the different actors to be involved in each activity.	List the required resources for each activity and describe where the resources come from.	For each activity, describe when you plan to initiate it and when to end.	Describe how you will monitor progress and evaluate the outcomes of each activity.
